

Leading Financial Services Firm Migrates to the Cloud with MMRIT

UK-based financial services firm reduces IT costs and increases efficiencies and productivity across its workforce.

THE PROBLEM

One of MMRIT's clients, a UK-based financial services firm within the City of London, was using a traditional style IT infrastructure setup towards the end of 2018.

All of their IT infrastructure was managed in-house within their office environment, which faced many challenges.

These were mainly that the infrastructure was old and needed modernising, many systems they used met compatibility issues with ageing hardware, and downtime was becoming an almost daily occurrence affecting hundreds of workers from accessing business-critical systems.

THE SOLUTION

The financial services firm turned to MMRIT to provide an infrastructure health check to identify where problems existed, how they could overcome these problems with minimal downtime, and how they could increase their productivity alongside reducing a growing IT bill.

THE OUTCOME

Following the IT health check that looked at five core areas: the age of the hardware, patch updates, compatibility issues, backup procedures and disaster recovery, MMRIT concluded that the IT infrastructure was in desperate need of modernisation.

As a result of MMRIT's audit, the client reviewed all options and transitioned to a private cloud offering delivered and supported by MMRIT.

The migration was a success with minimal downtime as the transition occurred out of regular business hours.

Part of the private cloud delivered by MMRIT includes a range of cloud backup, disaster recovery and cybersecurity services to maintain and protect their data and systems.

CLIENT QUOTE

"Since we've switched to a cloud-based infrastructure the number of incidents on our network has dramatically reduced to almost zero."

MMRIT monitor our entire network with next-generation firewalls, apply security updates and investigate every security event to ensure no one has unauthorised access to our systems and data."

Head of IT, UK-based Financial Services Firm

WHAT'S NEXT?

To find out more about MMRIT and how we can help you with your IT infrastructure, contact us on **020 7300 1100** or email **enquiries@mmrit.com**.

Our IT specialists are on hand to answer any questions you may have.

Note: Client name has been anonymised to protect their identity and IT infrastructure from false impersonation.
